SECTION 2
TRANSMITTED AND EXECUTION

It is the intent of this plan to establish a schedule whereby the City of Villa Rica will assume the authority and responsibility associated with the implementation of an Industrial Pretreatment Program for the existing industries currently permitted by the State of Georgia. It is also the intent of this plan to establish the procedures required for new additional Industrial Pretreatment Permits or changes requested to existing permits. Since all sewer system users reside within the jurisdiction of the city, no multi-jurisdictional agreement is required at this time.

The city will become responsible for administering, enforcing, monitoring, and implementing its industrial pretreatment regulations for the permitted industries on or about 30 days following approval of this plan by the City Council and the Environmental Protection Division. The current state industrial pretreatment permits for existing industries will become void (see section 3).

Applications for discharges that require the issuance of an industrial pretreatment permit, will conform to the guidelines as set forth in the city’s industrial pretreatment regulations. Applicants will utilize the city’s pretreatment applications for process wastewater form (see section 6). This information will be submitted to the plant manager in accordance with the provision of the city’s industrial pretreatment regulations and permits issued likewise.

Administration and monitoring of this program will be performed by the plant manager of the city’s wastewater department, or designate, and will comply with the provisions set forth in the city’s sewer use regulations, industrial pretreatment regulations, and implementation plan. Enforcement of the provision confined in those plans will be the responsibility of the plant manager or designate. An enforcement response plan will be utilized (see section 8).
